Following publication of our article, we discovered three errors in data reported in two manuscript figures. In Figure 1F, the 3-year probability of intracranial PFS in the brigatinib arm was incorrectly reported as 56% due to a rounding error and should instead be 57%. The data were correctly reported in the manuscript body. In addition, the number of patients at risk at 36 months in the brigatinib arm was incorrectly reported as 53 but should be 51. In Figure 2A, the *p* value for the HR for death, 0.305, was incorrectly reported in place of the log-rank *p* value, 0.3311. The log-rank *p* value was correctly reported in the manuscript body. Revised figures reflect the described corrections.

These errors do not alter the conclusion of the manuscript that brigatinib continued to demonstrate superior efficacy over crizotinib as first-line treatment for patients with advanced *ALK*+ NSCLC, consistent with two interim analyses.
